

NetScore Magento Connector for NetSuite

NetScore Magento Connector for NetSuite provides fully automated, real-time integration between NetSuite and the Magento webstore. This connector offers accurate product creation, and its real-time inventory updates allows timely order fulfillment in NetSuite and Magento. NetScore Magento Connector provides a fast and straightforward way to integrate order, product, customer, and other transactional details between NetSuite and Magento. Our connector supports all versions (Community & Enterprise *1.9.3 and 2.0*)

“Smooth Magento to NetSuite Integration

The NetScore integration team really understands how the API's work, and how to create successful connections. We had customized extensions in Magento that had fields that needed to be accessed and written. NetScore understood our requirements and customized their connector to meet our requirements. Their portal, showing successful transactions as well as errors, is located as a page in NetSuite, so no external sites need to be accessed. The installation process always moved forward, with excellent communication between our team and our Magento site developers. Inventory updates to Magento are exceptionally fast and accurate.”
