

# NetScore WMS Mobile for NetSuite

## Frequently Asked Questions

### Does NetScore WMS will take time to install and cost high in licensing, consulting and services?

NetScore WMS application specifically designed for small to medium sized businesses. By using best practice-based implementation, deployments can be achieved within 8 to 12 weeks from mapping your warehouse to interfacing with your host system. Software vendors lacking a demonstrated implementation methodology often see delivery timeframes move out and this raises costs. What you achieve with NetScore WMS is improved productivity, customer satisfaction, inventory accuracy, optimized warehouse space and profits.

---

### Won't the NetScore WMS app that fits our business now will be trivial in a couple of years?

NetScore WMS is integrated with NetSuite which will provide all the functionality you need today, along with an underlying technology platform that enables forthcoming growth. This ensures that our WMS would not require extensive new installations or customization in the future. NetScore WMS can provide a straightforward upgrade path to add new functionality or additional modules, such as slotting, labour tracking or productivity, expertise in interfaces with existing systems.

---

### Is our company too small to benefit from WMS?

Any company, no matter how small, will save on labour, improve inventory management, attain real time and accurate inventory information, expedite shipments, improve space utilization and increase customer satisfaction. NetScore WMS will give you an extremely accurate view of your inventory and will greatly reduce the amount of labour time. Productivity improvements will allow employees to spend less time moving paper, and more time being productive.

---

### Can NetScore WMS assimilate with Prevailing WMS?

No, Integration with existing WMS cannot be done, but we can migrate the data in CSS format from existing WMS to our NetScore WMS and operations can be done.

---

### Does NetScore WMS support Multiple warehouse?

Yes, NetScore WMS is a multi-building, multi-location system that allows you to manage each facility or warehouse independently or dependently. The warehouses can be side by side or on each end of the country.

---

### Can we add further modules and options as my business develops and expands?
