

NetScore Point of Sale

For NetSuite

NetScore Point of Sale (POS) for NetSuite provides a powerful application that supports customer facing sales leveraging the power of the NetSuite ERP solution. The flexibility of the cloud-based solution provides an ideal tool for use in retail point of sale environments, front counter operations, mobile retail applications, and showrooms.

Benefits

Flexible Deployment

Customers can choose from instore terminals, mobile tablets, or handheld devices to meet a variety of deployment requirements. Bluetooth scanners, wireless printers, and Square readers expand the capabilities of the solution.

Multi-purpose Use

The solution provides POS support for in-store retail environments, and mobile applications brings your POS solution to trade shows, mobile sales staff, and showroom applications.

Fully Customizable

You can leverage the power of the NetSuite customization tool sets to add fields, customized scripts and other modifications to meet your specific needs.

Real-time NetSuite Integration

NetScore POS solution fully integrates with your back-end system and leverages the power of NetSuite reporting and search capabilities. The application can be integrated with NetScore Loyalty Rewards, CPQ, and Delivery Management capabilities.

Features

Flexible Payment Methods - Payments can be processed immediately through credit card (including splitting payments across multiple cards), cash or debit cards. Also supports applying promotional codes, loyalty points, store credits, and gift cards / certificates.

One Touch Order Entry - Product icons can be displayed, and items added to the order simply by touching the item or by scanning a barcode. Quotes can be generated and later turned into orders with a single key stroke.

Manage Returns - Full support to manage item returns (including reasons for return), exchanges, store credits, and refunds.

Stock Check - Quick search provides a full view of inventory across your distribution center and all stores.

Customer Service - For the retailers who want to better know their customers, order history, returns, and all other transactions are available in the customer center. This includes their Loyalty status and available points if the system is integrated with the NetScore Loyalty Rewards application.

Pickup at store - When a customer places an order on webstore or a customer chooses a different location to pick up an item, a notification will be sent to the respective location. Each terminal will receive the notification with order details and shipment time.

Serialized Inventory - Cashiers have an option to choose available lot/serial numbers against items in the cart/item level.

Hold transaction - Customers have an option to save/hold their transactions for later purchases. They can purchase saved items even from another store.

Diverse Delivery - Customers have an advantage to choose multiple shipping options on a single transaction. For example, Orders can be purchased in store and the clerk is able to specify an address the customer wishes to ship the item to. Shipping costs can be added to the order at time of purchase.

Multi location pickup - Customers can choose to pick up items from different locations for single order.

Enable Terms - For B2B customers, they can avail their terms to get the transactions. All validations (hold transaction when reach credit limit) can be handled.

Billing/Fulfilling - NetScore POS supports partial fulfilment of orders.

Item Exchanges - Customers can exchange their products (goods) instead of returning them.

Integrations with Payment Processors

We provide access to the most up-to-date integrations, add-ons, and merchant processors in order to remain on top of retail trends.
